

DRINKING WATER CONCERN RESOLVED

Tropic, Utah

BOIL ADVISORY LIFTED

Town personnel worked to identify and correct the issue, flushed the water system as needed, and collected the required water samples for testing. Test results confirmed that the water meets drinking water standards and that the boil advisory could safely be lifted.

Tropic Town will continue to monitor the water system and complete any necessary follow-up testing, maintenance, or improvements to help ensure the continued safety and reliability of the Town's drinking water.

Flush household pipes/faucets first.

- To flush your plumbing, run all your cold water faucets on full for at least 5 minutes each.
- For a residence with multiple levels, start at the top of the house.
- If your service connection is long or complex (like in an apartment building) consider flushing for a longer period. Your building superintendent or landlord should be able to advise you on longer flushing times.
- If the water is discolored, continue to run it from the tap until it is clear.

Ice and automatic ice makers:

- Wash and sanitize ice trays.
- For an icemaker, dump existing ice and flush the water feed lines by making and discarding at least three batches of ice cubes.
- Wipe down the ice bin with a disinfectant.

Hot water heaters, water coolers, in line filters, and other appliances with a water connection or water tanks (such as kitchen appliances, humidifiers, swamp coolers):

- Run enough water to completely replace at least one full volume of all lines and tanks.
- Follow any other instructions from the appliance manufacturer.

Water softeners:

- Run through a regeneration cycle.
- Follow any other instructions from the appliance manufacturer.

Reverse Osmosis (RO) units: Replace pre-filters, check owner's manual.

Replace other water filters (fridge filters etc.), as they are disposable and may be contaminated. This applies especially to carbon filters and others that are near the end of their life.

Other:

Clean and sanitize all pet bowls.
